Due to no prior experience with any programming languages and data analytics. I faced a lot of challenges in catching up during the lesson. This was the reason for which I had to join After Hour classes with Sir.

Also I referred to various online resources suggested by the teaching fellow and visited various youtube videos to gain the knowledge. I have referred them wherever I took something from it. For the Final Project I couldn't clearly undertstand the process for making a prediction model. So I referred to the following video for help https://www.youtube.com/watch?v=jTCkpB7vjRA&t=2s

I have learnt about creating a Miniconda, R Studio and VS Code in this module . The teaching faculty and everything else during this course was pretty awesome. One suggestion I would like to provide is to make available tutorial videos for students such as myself who have no prior experience by the faculty in the Course because I found them to be really knowledgable and experienced.

 Thank you
